**INFORMATION DISCLOSURE STATEMENT
UNDER 37 CFR §1.97 & 1.98**

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

December 29, 2004

Sir:

In the matter of the above-identified application, Applicants are submitting herewith a search report and copies of the documents listed in the attached form equivalent to Form PTO-1449 for the Examiner's consideration.

This information disclosure statement is being submitted before the mailing date of a first office action on the merits.

Each of the documents listed on the attached form equivalent to Form PTO-1449 is in the English language.

It is respectfully requested that this information disclosure statement be considered by the Examiner.

Please charge any shortage in the fees due in connection with the filing of this paper, including extension of time fees, to the deposit account of Mattingly, Stanger & Malur, Deposit Account No. 50-1417 (referencing attorney docket no. 1288.43131X00) please credit any excess fees to such deposit account.

Respectfully submitted,

Frederick D. Bailey

RE: Petition-To-Make-Special Search
For: **CACHE CONTROL METHOD FOR NODE
APPARATUS**
Your Ref. No.: 340300340US01
Our Ref. No.: HIT 1135

Dear Mr. Otsuka:

We have completed the petition-to-make-special search at the U.S. Patent and Trademark Office regarding the above-identified invention. The field of search covered Class 711, subclasses 138 (U.S. & Foreign) and 139 (U.S. & Foreign). Additionally, Additionally, a computer database search was conducted on the USPTO systems EAST and WEST for U.S. and foreign patents; a keyword search was conducted in Class 711, subclasses 113, 154, 170 and 203; and a literature search was also conducted on the internet and commercial databases for relevant non-patent documents. Examiner Kevin Ellis in Class 711 (Art Unit 2188) was consulted in confirming the field of search.

The search was directed towards a cache control method for node apparatus. In particular, the search was directed towards claims 1-19 of U.S. Application Number 10/663700 and U.S. Patent Application Number 2004/0186961. The claims describe a cache control method in a computer system, in which a storage device, a node device including a disk device for cache and clients are connected together, for controlling the cache in the disk device, comprising the steps of; sending attribute information of data to the node device in the storage device or the client; in the node device, judging as to whether or not the data to be relayed is allowed to be cached in the disk device; and relaying the data which has been judged as non-cacheable. A node device that includes a disk device for cache and relays transmission and receipt of data between a storage device and clients, comprising an attribute information input module, a judgment module, and a cache control module. A storage device that provides a client with data via a node device including a disk device comprising, an

attribute information management module. A data source device that provides other computers with data via a node device including a disk device for cache comprising, a judgment module, and a transmission control module. A computer readable recording medium in which a computer program is recorded, the computer program causing a computer to control operations of a node device that includes a disk device for cache and relays data between a storage device and clients, the computer program causing the node device to attain the functions of means for inputting attribute information, means for judging as to whether or not the data is cacheable, and means for relaying the data, and as further claimed in the disclosure.

Brief Description Of The Documents:

U.S. Patent Application Number 2004/0186898 (Kimura et al.) shows a disk device, including a share volume with specified capacity that is used in common among the plurality of clients, and a plurality of specific volumes that are segmented one another, each of which is associated with one of the plurality of clients. The data source device may be applied to a computer system with a node device that is connected between the data source device and the plurality of clients and relays the data between them. The data being relayed is cached in the disk device in the node device. The data stored in the share volume and the data stored in the specific volume on the data source device are preferably processed separately in the case of the node device. The data source device may output specific information to the node device, wherein the specific information is used to judge the volume in which respective data are stored, and the share volume or the specific volume. See figures and summary.

U.S. Patent Application Number 2003/0009640 (Arimilli et al.) shows a non-uniform memory access (NUMA) data processing system comprising a plurality of non-cacheable indicators that are each associated with a respective one of plurality of nodes, wherein a set non-cacheable indicator instructs the at least one processing unit in the associated node to not cache data associated with non-physical addresses within the group. See figures, summary and claims 1-5.

U.S. Patent Application Number 2004/0123068 (Hashimoto) shows a computer system, comprising a disk drive control block (408) for controlling the disk drives (122-125) according to the I/O commands from the host processor (101), and a disk cache control block (409) for controlling the data stored in the disk caches (119, 120) and makes cache hit/miss judgment or the like. See figures, summary and [0071]-[0077].

U.S. Patent Numbers 5,423,019 (Lin), 5,452,447 (Nelson et al.), 5,860,107 (Patel), 6,799,244 (Tanaka et al.), U.S. Patent Application Numbers 2003/0074525 (Yamauchi et al.), 2003/0188085 (Arakawa et al.), 2004/0034746 (Horn et al.), 2004/0123049 (Cypher et al.), and European Patent Numbers EP509676 (Mirza), and EP 886216 (Shiell et al.) show a cache control and node apparatuses.

While the above-noted Examiner was consulted and confirmed our opinion that the most relevant areas for this invention were reviewed, further searching may uncover additional patents. NOTE: The field of search included the most pertinent areas identified by the Examiner and our office as containing relevant patents.

Mr. Noboru Otsuka
